I used all of SPIDER benchmark and did an experiment with schema context given. Here are the results:

	easy	medium	hard	extra	all
count	248	446	174	166	1034
==========	EXECUTION ACCURACY	==========			
execution	0.766	0.502	0.425	0.235	0.510

I also did another experiment with Fuzzy String and BM25. Here are the results:

	easy	medium	hard	extra	all
count	248	446	174	166	1034
==========	EXECUTION ACCURACY	==========			
execution	0.778	0.513	0.431	0.259	0.522

Small increase, nothing important.
